Pharmaplan (Switzerland)-TTP Group / Rosenheim, 07.May 2020: In This year's prize in the category "Equipment Innovation" went to F. Hoffmann-La Roche AG In-Vivo Research project in Basel "B098: Setting the new standards for an in vivo building". This was the first time the prize was awarded to an in vivo research and laboratory building.

"The new In vivo building brings innovation to one of the lesser understood parts of the pharmaceutical discovery and development process. The equipment innovation that is found in every part of the project aims to protect researchers and animals, drive efficiency, and set new industry standards for animal research," the jury said.

Pharmaplan in Switzerland was responsible as general planner for the engineering (process design / plant technology, laboratory & vivarium, HVAC, automation) and the coordination (electrical, ventilation, construction / architecture) of this highly flexible and highly automated research and laboratory facility.

Above all, the modular laboratory concept, which allows for customizable conversion within only two weeks, the fully automated handling and cleaning of the cages and the well-thought-out use of AGVs are highlights of the building.

About the TTP Group: The TTP Group is a group of companies specialized in engineering services for the process industry. Since 2019, the management company TTP GmbH has united the TRIPLAN and PHARMAPLAN companies under one roof. This makes the TTP Group one of the leading medium-sized engineering companies for the process industry in Europe. More than 900 employees are working at over 20 locations in Belgium, Germany, France, Switzerland and India.

PHARMAPLAN is a valued engineering partner of the European pharmaceutical industry and covers the entire range of engineering services - from feasibility and concept studies to the implementation of investment projects (EPCMV) and on-site support in operational engineering.

Under the operational brand TRIPLAN, TTP offers engineering services for plant construction primarily in the chemical and petrochemical industries. As an independent general and component planner, TRIPLAN takes over the technical development for new construction projects, conversion projects and the modernisation and optimisation of existing plants.
